

**FusionVM Expands Capability for Managed Service Providers**  
***Latest product release enables new level of security service delivery***

April 25, 2007 – (Dallas, Texas) - Critical Watch, a leading security risk management solutions provider, released an expanded set of capabilities that enables Managed Service Providers to drive ongoing vulnerability and risk management services to clients. The new FusionVM MSP solution introduces expanded user administration and roll-up reporting for centralized management of multiple clients from a unified portal.

“Having some key strategic partners using our existing functionality for selling services has enabled us to learn directly from them as to what the next generation should be,” said Critical Watch President and CEO, David Laizerovich. FusionVM MSP is unique in that it allows a broad centralized administration for “Client Administration” but also has the flexibility for customizing and limiting access for each client as needed. Also included are unique MSP-level reports that show each client’s key security metrics in a comparative summary dashboard.

This enhanced administrative and reporting framework enables MSPs to efficiently scale and manage a vulnerability management service as an annuity based offering while providing higher service levels for security through a proactive continual service. FusionVM MSP is leveraged by large corporations with subsidiaries, diverse higher education institutions, distributed healthcare networks or any other umbrella entities needing autonomous operations with a common report layer.

**About Critical Watch**

Critical Watch is a leading provider of security risk management and compliance solutions that enable a comprehensive business process for integrating vulnerability management across the enterprise. In addition to its FusionVM suite of products and services, Critical Watch provides PCI Compliance services as a certified vendor. Critical Watch clients are Global 2000 enterprises across verticals such as healthcare, financial services, state and local government, e-commerce and manufacturing. FusionVM empowers organizations to:

- Efficiently and effectively manage business critical risks across the enterprise
